

## Ground.

Portable light designed with reused coffee sacks.

### Context

This lighting project is based around gathering together near the end of the day. The social interaction surrounding low mood light brings comfort encouraging more personal and intimate talking.

### Inspiration

Looking at the existing market, portable lighting has a soft feel to it and creates ambient light that can travel easily. My design aims to be transportable and use materials that contribute to the feeling of the light.

# Development

## Ground.

Developing bag and base, finding creative solutions to house the electronics and diffuse the light through the bag.

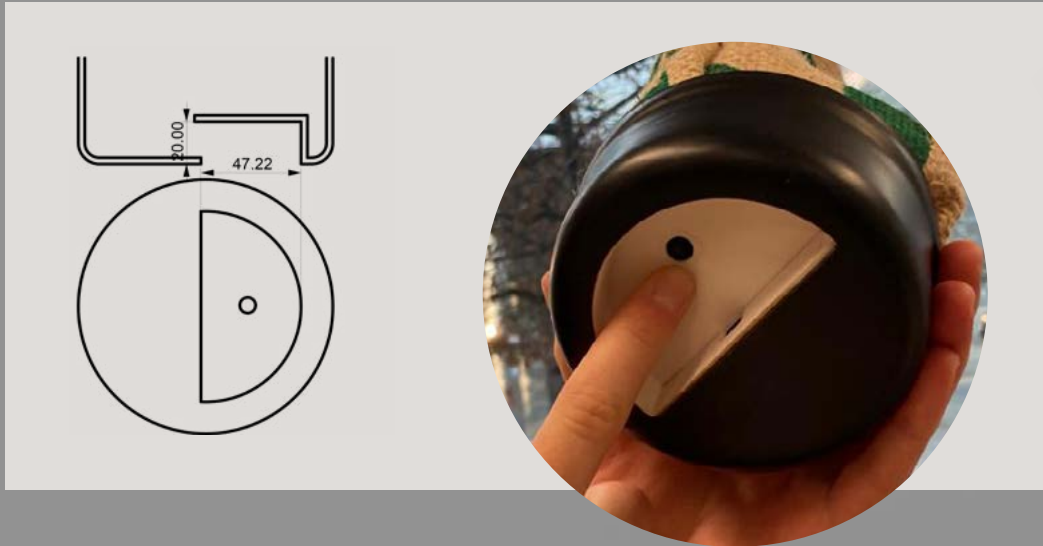

3.

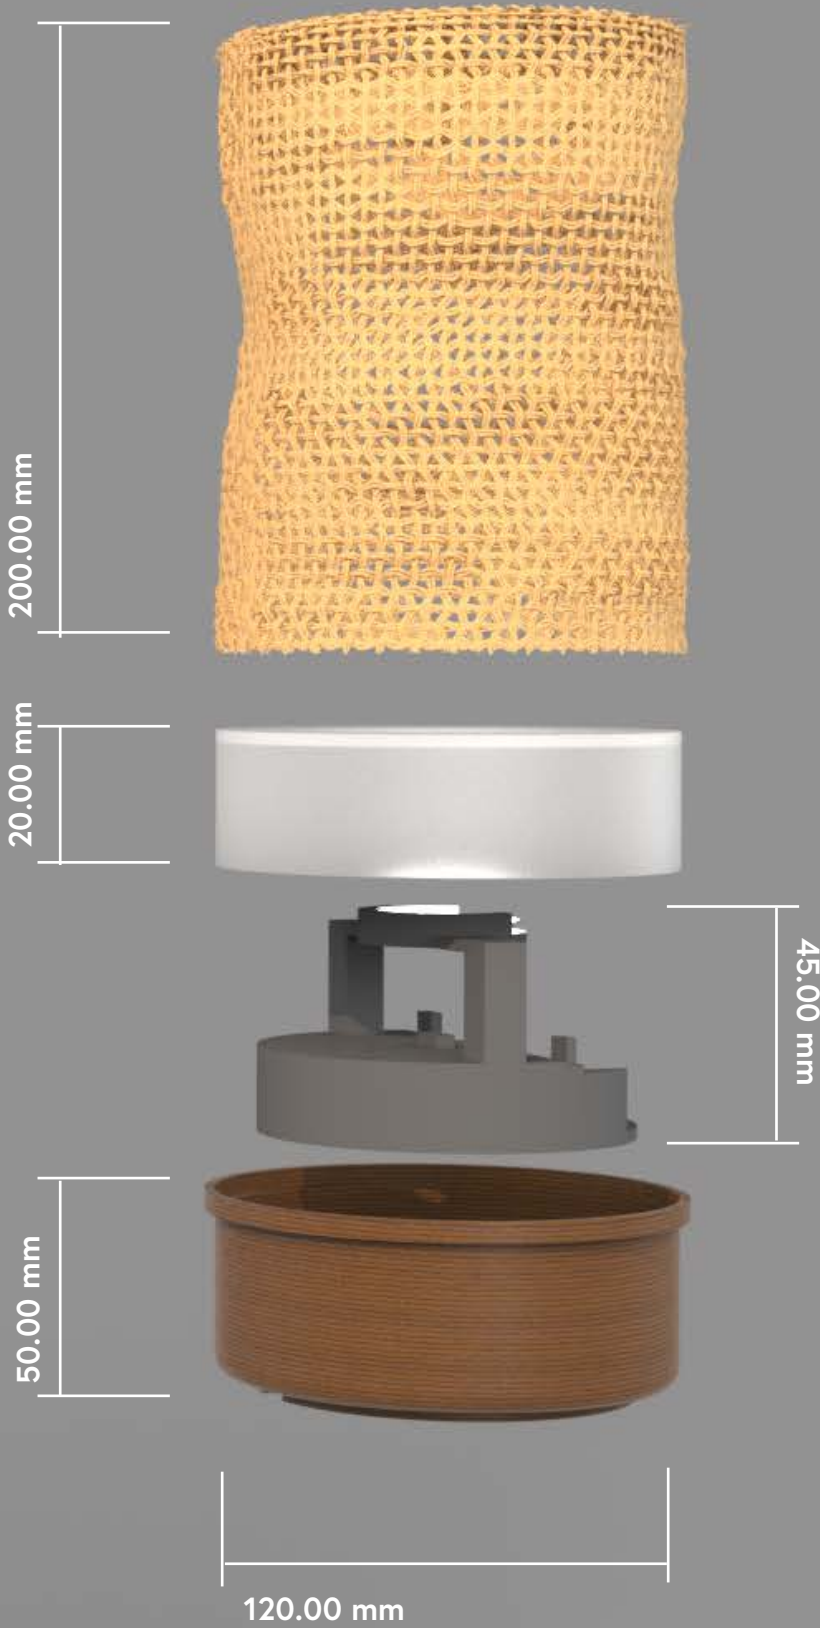

Materials choice: recycled coffee sack and cedar wood base

Base designed with internal housing for electronics and area to switch on and charge underneath
